

Editorial

Dear Readers,

Welcome to this issue of the Journal of Object Technology (JOT). I am delighted to welcome two professors from York (Richard Paige, University of York, UK and Jonathan Ostroff from York University, Toronto) as co-authoring a Guest Column in this issue. In addition, we are again honored to have guest columnist Adele Goldberg contribute her third such column. I am most grateful for her contributions and support.

Our two guest columns are joined by five regular columnists of significant stature. Won Kim, Anthony Simmons, James Odell, Mahesh Dodani and Donald Firesmith have again graced our pages with their work. I think you will find their columns useful and interesting.

Like in previous issues, our four reviewed feature-length papers hail from around the world (France, Switzerland, United States and Canada) and deal with the theory and practice of object technology. With the prospect of a relatively short review time and time to publication, I continue to welcome article submissions.

Please send me feedback regarding our editorial content in order to help us determine our future direction. Thanks.

Kind regards,

Richard Wiener
Editor-in-Chief
